Energy Consumption Management
Measure, compare, analyse & reduce.

ecoMITA — Helping you to understand your energy consumption and your carbon footprint enabling a reduction in both.

Consumption Dashboard & reporting

Different types of energy consumption -gas, electric, LPG, and Diesel are displayed separately, enabling a detailed examination of energy consumption.

Carbon footprint

The electric generation mix is used for carbon footprint calculations.

Carbon credits

Renewable energy generation shows in carbon reduction. This can help you seek credits -where available.

Features

Shows energy usage. Will compare different fuels consumption for costs and CO2.

Consumption & usage data compared , same month previous years.

Water usage is shown with comparisons.

Compares financials for each commodity, and compare variation against budgets.

Enhanced Features

IoT & Smart devices can be supplied to read meters and send readings automatically real-time.

Meter Readings can be collected hourly, if needed enabling much better analysis.

Outside temperatures, together with AI (coming later), allow a greater understanding of energy consumption patters helping to predict future consumption or targeted mitigations.
